

## Euclid Brake Repair Kits

---

### The MEGA Line of Brake Kits

MEGA PLUS and MEGA Kits offer premium quality, meeting or exceeding OE specifications, for fleets demanding long life and proper brake adjustment. Genuine Euclid MEGA kits contain the highest quality components available: exclusive diamond-knurled rollers, hard chrome or zinc dichromate plated anchor pins, high-grade stainless steel bushings and shot peened music wire returned springs.

Euclid MEGA PLUS Kits also include a 100-pound tension, heavy-duty return spring, high-grade stainless steel “dimpled” anchor pin bushings and anti-

seize lubricant. This combination of components yields long-term cost-per-mile savings, especially in rugged applications where standard quality parts may fail.

### STOPMATE Kits for Standard Applications

STOPMATE Kits offer an OE quality replacement for fleets requiring a standard quality kit for on-highway applications. STOPMATE kits contain Euclid’s exclusive diamond-knurled rollers, zinc dichromate plated anchor pins, steel bushings and music wire return springs.
