

Remanufactured Products

ArvinMeritor's Commercial Vehicle Aftermarket (CVA) business remanufactures its products rather than simply rebuilding them. If a part is worn, CVA replaces it with a selection of brand-new genuine parts. All remanufactured products are high quality and are offered below the cost of a complete new unit.

ArvinMeritor CVA follows tough remanufacturing standards and a thorough inspection process for all of its reman products. First, they discard all critical and damaged parts and replace them with genuine, new parts. Then, they put the remaining parts through their toughest tests. Magnafluxing checks for cracks, stress and fatigue points. Dimensional quality control testing ensures that every part meets strict specifications for optimum performance. And, load testing simulates actual road conditions and ensures products meet strict OEM new production standards. All products are backed by a one-year remanufacturing warranty.

CVA remanufactures products in its own facility, utilizing the same equipment and manufacturing processes as its original equipment. The company's dedicated remanufacturing facility, located in Plainfield, Ind., is QS9000 certified and environmentally focused. The facility produced more than 366,000 reman units in fiscal year 2001. The Plainfield remanufacturing site utilizes top-notch remanufacturing

processes to ensure high-quality parts. It features the latest equipment such as belt conveyor aqueous washers, a tumble washer, media shakers, burn-off oven, tumble blast, spinner machines and sandblasting. The facility also has a stamping press, presses for disassembly and assembly and machining for grinding, milling, drilling, welding and more. All remanufacturing and testing is on-site.

ArvinMeritor CVA produces remanufactured parts under the Meritor[®] and Euclid brand names. Meritor product offerings include:

- Axle Carriers
- Relined brakes
- Clutches
- Transmission
- Lucas A2LS cylinders

Euclid product offerings include:

- Calipers
- Hydraulic brake cylinders
- Air compressors
- Valves
- Starters/Alternators
- Air dryers and cartridges
- Water pumps
