

Product Information

MCK1294 DX Brake Greased Eccentric Kit

Commercial Vehicle
Aftermarket

Braking Products

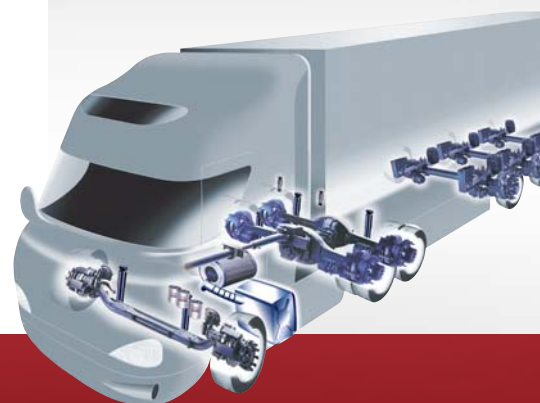

New kit to allow regular brake maintenance to include greasing of the cover plate bearing without the removal of the cover plate.

Eccentric shaft has greasing nipple **(1)** fitted to the top face, with the grease holes **(2)** emerging from the eccentric at the level of the cover plate bearing and seal **(3)** to ensure correct grease application.

Cover plate gasket **(4)** now metal and rubber composite to allow more accurate and robust assembly.

Baffle washer **(5)** added to ensure grease applied via grease nipple is retained in the bearing.
